

BOX TYPES (Radiant & Recirculating)

- Retort Series (Inert & Active Atmospheres)
- Hardening & Draw Heat Treat Combination Furnaces

Two independent controlled chambers, same floor space needed for one!

- Hardening Chamber 2300°F Max
- Draw Chamber 1200°F Max

The Electra Series H&D furnace lines is a unique “piggy back” design that provides a complete heat capability requiring minimal floor space.

Two independent furnace chambers are provided. The top chamber is optimized for hardening operations, while the lower chamber is optimized for tempering or drawing operations.

Each chamber is completely wired with an independent control system: just connect the main power to operate.

- The Series 2300 Radiant Box Furnaces allow operations up to 2300°F.
- The Series 1200 Recirculating Box Furnaces allow operations up to 1200°F.
- Single chamber furnace systems are also available.
- 21 standard sizes are available.
- Custom sizes are also available upon request.
